## New Ultra-thin LED Traffic Light

TRAFFIC 030 >>>

Red and Green  
LED 24V Traffic Lights

Includes 15ft of wire

### Manaras-Opera's New LED Traffic Light

Manaras-Opera is pleased to introduce a new model of traffic light from "Super Seal" in our product range.

#### Product Characteristics

- This new type of traffic light has an ultra-thin design (1/2" of thickness) and includes a series of LEDs (24V only) instead of bulbs as on our TRAFFIC 029.
- It is only 22.5" x 9" and can be used either as traffic or warning light.
- Due to its low current consumption, no extra VA is needed and it can easily be connected on the secondary side of our standard 40VAC transformer.
- TRAFFIC 030 is highly visible day or night, and is designed for any weather condition.
- Made up of polymeric film (mixture of plastic and silicone), it comes with 4 pre-drilled mounting holes (no holding brackets or fixing fittings).
- TRAFFIC 030 is supplied with 15ft of wire.
