Limit System as it used to be >>>

New Improved Limit System >>>

Screws are used as easy-access studs

Unique central lever has been eliminated

Independent lever on each limit

Manaras-Opera's Improved Limit System

Responding to your needs, Manaras-Opera is pleased to announce that they have developed a new improved limit system for their Hardwired Opera applications, beginning mid-June 2009.

What has changed

- Unique central lever has been eliminated.
- The Close and Open limits each have an independent lever which is specifically designed for a more consistent activation.
- The limit fastening screws have been used as studs in order to enhance accessibility.

The phasing-in/out process will begin mid-June, as a running change.

For experienced door technicians, the factory-set Advanced Close Timer may be adjusted in the field. Please refer to the instruction manual for further details.

For further information, please contact your Manaras-Opera sales representative.
